

Mosser Apps

Tools we've built for the Mosser portfolio, plus a few LFI products Mosser has a seat on. Have at it.

Portfolio: ~2,561 units · 20 SF properties **Owner:** Justin / LFI **Last updated:** 2026-05-11

Leasing — Competitor Intelligence

LIVE

MOSSER ONLY

[leasing.mosser.app ↗](#)

Daily-refreshing intelligence on every SF multifamily competitor listing — rents, concessions, days-on-market, removals.

Scrapes eight SF competitor operators across AppFolio, Yardi RentCafe, and custom platforms, plus a Craigslist SF filter. Full Type 2 change history. Anonymous CL posts attributed back to operators via editable fingerprint dictionary.

▾ View details

USE CASES

- Daily concession parity check before setting vacancy quotes
- Submarket pricing benchmarks by operator and floor plan
- Days-on-market and removal-event tracking
- Craigslist activity color (who's struggling, who's not)
- Source data for the Pricing and Revenue Management app

OPERATORS TRACKED (8 + CL)

2B Living · Gaetani · Brick + Timber · Trinity SF · Parkmerced (Maximus) · RentSFNow (Veritas) · Mosser Living · Rentals Inc. · Craigslist SF multifamily

STACK

Neon Postgres 15 · Cloudflare R2 · Next.js 14 on Vercel · Python ETL (HTTP + Playwright) · GitHub Actions cron 6am PT

LIVE STATS

Mosser AI Gallery

LIVE

MOSSER ONLY

[gallery.mosser.app ↗](#)

One catalog for every reusable AI asset used across Mosser apps — prompts, skills, commands, and add-ins.

Ready-to-paste prompts, multi-step skills, slash commands that fire from chat, and add-ins pulled in from Hugging Face. Click any tile to view, copy, or run. Reduces redo work across leasing, AM, and analyst tasks — if it's reusable, it lives here.

▾ View details

WHAT'S INSIDE (LIVE COUNTS)

20 prompts · 53 skills · 34 commands · 5 categories

SAMPLE ASSETS

- **Market & location intel:** RE Market Pulse, Cap Rate Arbitrage Scanner, Neighborhood Momentum, Rent Trend Forecaster, Weekend Market Digest, Predictive Disposition
- **Rent & comp:** Rent Upside, Market Narrative, SF Open Data Sync, City Data Integration
- **Deal, asset & portfolio:** Deal Dossier, Property Comp Analyzer, Portfolio Risk Dashboard

HOW THIS WORKS

Three primitives. *Prompts* are single-shot text you paste into a chat. *Skills* are multi-step workflows packaged as reusable automations — they define inputs, execution steps, and outputs, and contracts to agents and operators run them consistently. *Commands* are slash commands that fire from chat. Each tile has Provision / Execute / Chat actions so the team can drop them into any Mosser app or run locally.

Last scrape run: — · Active listings: — · CL ads (7d): —

Values fill in once the chat is wired into this app.

Pricing and Revenue Management

UNDERWAY

MOSSER ONLY

URL pending —
in build

Supports the leasing team in setting rents — balancing restrictive covenants and reporting requirements while keeping value creation the goal.

Sits next to leasing. Combines Mosser's own data with public market signal, respects every bound we operate under (AGA, banking rules, lender covenants, reporting), and surfaces rent recommendations built for long-term asset value — not just next month's collection.

▸ View details

USE CASES

- Vacancy-reset rent recommendations for leasing, with the comp evidence behind them
- AGA-bounded renewal ranges that respect banking rules and lender covenants
- Concession parity alerts when the comp set moves and our offers don't
- Reporting-ready outputs that drop into lender and investor templates
- Audit trail of what was recommended vs. what was set — closes the loop
- Defensible-by-design under §37.10C and the RealPage settlement

ON THE §37.10C / REALPAGE STUFF

SF banned algorithmic pricing tools that pool competitor rent data (effective Oct 2024); DOJ's RealPage settlement piled on. We sidestep all of it by only ever touching first-party Mosser data

Brick LIVE LFI PRODUCT · MOSSER-ONLY ENV

hu...

AI-enabled asset management. Scales AUM by focusing AMs on what creates value and what flags risk.

LFI flagship product, running in a dedicated Mosser-only environment. Ingests M365, Granola, Smartsheet, Teams, and Brickston Cloud SQL event triggers; extracts tasks, commitments, decisions, and entities resolved to property and resident.

▸ View details

USE CASES

- Morning briefing: tasks landing today, commitments approaching, lease and AR triggers
- Entity-resolved decision and commitment recall across email, chat, and notes
- Permit and code-violation awareness around portfolio properties (proximity-tagged)
- Vendor COI expiration tracking
- Narrative layer the Mosser team can query without needing Yardi access

HOW THIS WORKS

Brickston is an LFI product, but Mosser runs in its own dedicated environment — no other clients in it. So from Mosser's side it's effectively single-tenant. LFI builds the product, Mosser uses the instance. Feature ideas go to Justin.

STACK

Postgres items.* schema (tasks, commitments, decisions, entities, property_lookup) · M365 / Granola /

and public listings. No surveyed rent rolls, no shared yield data. Kill switch is in the build plan if the rules shift.

BUILD PLAN

Nine phases over 9–10 working days: init → Brickston access → mosser_mirror → competitor_mirror → pricing analytics → BI → AI Q&A → deploy + cron → verify.

STACK

Python (psycopg3, Cloud SQL Auth Proxy) · Neon Postgres (separate project from Leasing) · BI layer TBD · Phase 7 deploy + cron

Repo: 04-mosser.apps/pricing

ETA: ~10 working days from kickoff

Smartsheet / Teams connectors ·
Brickston agent · daily PBI rollup
sync 04:03 PT

Product: LFI **Environment:** Mosser-only

RepairCo

COMING SOON

MOSSER ONLY

backninetra...

KPI and performance engine for our newest venture — keeps the business plan honest and the P&L on track.

Built to make sure RepairCo hits its numbers. Pipes operating data into KPI dashboards mapped to the business plan, flags variances early, and keeps the venture accountable to its profitability targets before issues show up in the financials.

▸ View details

WHAT IT'LL DO

- Live KPI tracking against business plan targets — by month, by function, by line item
- Variance flags when performance drifts off plan, before it hits the P&L
- Unit economics and margin tracking — what each job earns vs. what the plan says it should
- Trend lines that catch problems early enough to fix them
- Board / sponsor-ready reporting straight out of the same data

STATUS

Scope coming together. Tile updates when the build kicks off.

Target launch: TBD

Audience: RepairCo leadership + Mosser AM
